

BATTERY SERVICES:

RECYCLING

WE'VE ALWAYS BEEN GREEN

For more than 55 years, Interstate Batteries has collected and recycled lead-acid batteries using a system that surpasses state and local battery regulations. Not only do we make it easy to find just the right battery, but we also make recycling easy for ALL of your company's used batteries.

After their useful life, the chemicals in spent batteries can become an environmental hazard and in some states improper disposal is a legal violation.

Interstate's recycling system ensures compliance with all environmental and transportation laws, protecting you from financial liability while helping the environment. We work with local and national facilities to recycle or discard batteries in the most environmentally-friendly manner possible. From dead car batteries to lifeless power tool and cell phone batteries, we do it all as your one-stop battery recycling center.

RECYCLING SERVICES INCLUDE:

- Customized recycling programs
- Drop off and scheduled pickups available
- Help with EPA audits
- Disposal of all sealed lead-acid, NiCd, NiMh, Lithium Ion and Lithium Polymer batteries

Green may be the color of our batteries, but it also signifies our commitment to the environment and our customers. Partnering with Interstate makes battery recycling virtually risk-free for your company and allows you to spend your time and resources growing your business.

EVERY BATTERY FOR EVERY NEED[®]
